

Networking

ASAP Computer Services can help you plan, deploy, optimize, manage and run your network infrastructure and IT assets.

Networking

As businesses continue to expand and increasingly rely on Internet technology --wired and wireless, the network infrastructure has become a mission-critical component of a competitive business. Today's business and technological advances require a responsive network infrastructure that is designed to control your costs and reduce risks to your business while enabling you to seize new business opportunities. We can help you plan, deploy, optimize, manage and run your network infrastructure – virtually regardless of its complexity and of your organization's size.

We can assist in your efforts to:

- • outsource IT services and positions
- • achieve business viability
- • meet and exceed your businesses IT support needs
- • manage complexity
- • maintain a competitive edge
- • implement exchange server, small business server, server 2003 and other Microsoft server based products into your organization

ASAP Computer Services offers:

- • server and network design, installation and maintenance services
- • planning, deployment, optimization and management of your complex, multivendor IT infrastructures
- • automated backups of your mission critical data, automatically
- • integrated, industry-focused solutions to business and IT problems
- • solutions addressing business transformation, cost efficiency, risk mitigation and resilience concerns
- • flexible terms and conditions, ranging from project engagements, ongoing services engagements, and outsourcing - including ASAP delivery
- • experience, proven methodologies and tools
- • single accountability and real-world experience for services

ASAP has a broad scope of resources dedicated to integrated technology and on demand infrastructure services, but that doesn't mean we work alone. In fact, ASAP works alongside some of the best companies in the business - such as AT&T, Avaya, Time Warner, and Microsoft and each one brings something unique to the table including:

- High-tech infrastructure
- Delivery expertise
- Reliable hardware
- Leading industry-application software, and more.

ASAP can provide you with the most comprehensive solution possible. Wherever you are, a network specialist is ready to work with you.
